

Since 2000, the WaterFoundation has focused its activities on rural areas in Africa and Latin America, where the lack of clean and accessible drinking water endangers people's lives. Supported by numerous donors, we work together with local partners to build easy-to-use spring tapplings and wells, install fog collectors, lay water pipes, install pumps, build cisterns, washing facilities and toilets, organize water transport, take care of reforestation and explain how to use water sustainably.

Thank you for supporting the work of the WaterFoundation!
